

TACTICAL EMERGENCY CASUALTY CARE (TECC)

For Law Enforcement

A course designed to present a strong foundation of principals to provide immediate on scene medical care to successfully stabilize civilians in a tactical environment

Target Audience: *all members of law enforcement to include officers, deputies, investigators, detectives, troopers, and agents*

This course is designed specifically for Law Enforcement personnel and is created to present a strong foundation of principals to provide immediate on-scene medical care to successfully stabilize civilians in a tactical environment. This is an 8-hour course composed of a didactic / lecture presentation and a psychomotor portion of the course that will put a hands-on training approach into practice from what has been taught in the classroom.

Course Objectives:

- Learn the differences between responding to and dealing with an isolated incident versus a high-threat situation with mass casualties.
- Learn and reinforce basic life-saving TECC skills for law enforcement personnel that may be applied in "officer down" self-help/buddy-aid situations, as well as provision of point of wounding care during other high-threat incidents such as Active Shooter.
- Proper application and interventions such as tourniquets, wound packing, chest injury management, and more

Registration Details
